Thoran Mani Sangeeth Patapalla

+91 8247053005 — msangeeth28@gmail.com — linkedin.com/in/msangeeth28 — github.com/msangeeth28

Career Objective

Motivated B.Tech student specializing in Artificial Intelligence and Data Science with fundamental knowledge in Python, SQL, Object-Oriented Programming. Experienced in developing Machine Learning projects using Python. Passionate about applying AI and software engineering skills to build practical, real-world solutions.

Education

B.Tech in Artificial Intelligence and Data Science — **2023 – 2027**
Sagi Rama Krishnam Raju Engineering College, Bhimavaram — *Current CGPA: 8.69/10*

Intermediate (MPC) — **April 2023**
SASI New Gen Junior College, Velivennu — *97.7%*

SSC — **June 2021**
Aditya School, Palakollu — *96.3%*

Technical Skills

Languages: Python
Databases: MySQL
Frontend: React.js (Basic)
Core Subjects: Object-Oriented Programming (OOP), Machine Learning
Tools: Postman, Jupyter Notebook, Visual Studio Code
Soft Skills: Team Collaboration, Problem-Solving, Continuous Learning

Projects

AI Fitness Tracker | *Python, Scikit-Learn, Streamlit* | (github.com/msangeeth28/AI-Fitness-Tracker)

- Developed a machine learning web application to accurately predict calories burned during physical activity based on physiological parameters including heart rate, BMI, and workout duration.
- Performed Exploratory Data Analysis (EDA) to identify feature correlations and trained a Random Forest Regressor achieving an R^2 score of 98.3%.

Weather Application | *React, Vite, Axios, REST APIs* | (github.com/msangeeth28/weather-app)

- Developed a responsive weather application using React and Vite that provides real-time weather updates based on browser geolocation or user-selected locations.
- Integrated Open-Meteo and OpenStreetMap APIs using Axios to fetch weather information and reverse-geocode coordinates into readable city names.
- Implemented temperature-based weather icons, responsive layouts, and robust error handling for an improved user experience.

Experience

Machine Learning Intern – APSSDC (Remote) — **May 2026 – Jul 2026**
Project – Predictive Maintenance using Python

- Developed a predictive maintenance system using **Python, Scikit-Learn, and XGBoost** to predict machine failures and classify failure types from industrial sensor data.
- Performed feature engineering and built an optimized ML pipeline using **ColumnTransformer, Pipeline, and GridSearchCV**, achieving an **0.83 F1-score** and **98.47% ROC-AUC** on a highly imbalanced dataset.
- Deployed the automated machine health prediction system by serializing pipelines with **Joblib** and creating an interactive web interface using **Streamlit**.

Certifications

- **HACKOVERFLOW Hackathon Participation (2024):** SRKR Engineering College
- **Python Essentials Level 1 & Level 2 (2024):** Cisco Networking Academy.
- **Machine Learning using Python (2025):** Talent Trek.
